# **CYBER DEFENSE PROGRAM**

## **Introduce to Program:**

We all are well aware about the attachment of students to the android mobile phones for their studies now-a-days due to closure of schools because of pandemic situation for the last one & a half year while more than majority of the user have hardly got any knowledge about various negative aspect of Cyber Crime, Cyber Safety & Security as well as handling of social media. Because of these reasons, the Cyber Criminals / Fraudsters are getting ample scope to commit multi various Cyber Crimes.

At this juncture, it has now become inevitably needed for the students to be well aware & to get sensitized in this regard. Citizens will not come if we arrange a cyber-security awareness seminar. We can't go & train rest citizens door to door. We can only get students in one place like school, college. Maximum students are handling digital devices of their family. So if we can aware 1 student, we can protect 1 family from cyber-attack. Since we can get approx. 800 student in 1 school so we can protect 800 family, working in 1 school. When we are working in 100 school, we can protect  $100 \text{ (school)} \times 800 \text{ (student)} = 80,000$  family per year.

So we are providing Cyber Volunteers to each schools. They will aware students 365 days about every new types of cyber fraud so that via students we can protect maximum families. School will not pay any payment to our Cyber Volunteers. They will get monthly payment from us.

But, to understand cyber security students need some IT knowledge. To get IT knowledge they are going to private computer centres and spending thousands of rupees. The excitement of being computer literate may be seen in the student as well as other peoples also. Many of schools have made computer education compulsory from 5th standard and every year thousands of students are enrolling in various Diploma programs. Therefore, the remaining unaffected by the computers is very difficult.

Considering the importance of Information Technology, we are also providing IT training to every corner of the country without any training fees for those people who are not able to gain this vital IT knowledge mainly due to the highly unaffordable charges laid on them for learning computer by the various private institutions. Shreeshaya IT Literacy & Cyber Security is offering unique opportunities and advantages to every school students & providing them every possible support is the main quality of the organization. We are providing certificates to all the students which helps them get jobs and hence helps them for better future.

## **Objectives of Program:**

- Protect families from cyber frauds by providing continuous Cyber Security Awareness.
- Share the knowledge of Computer Fundamentals, software, Hardware, Networking, Programming.
- Sharpen the hidden skills.
- Provides certificates to all the students.

## **Goal of the Program:**

- ✓ Mission Hack Proof India
- ✓ Reach the milestone of "100 % Computer Literacy" in India.
- ✓ Make Digital India.

## **School's Responsibilities**

- ❖ School don't have to pay us any training fees.
- ❖ School don't have to pay the salary of Cyber Volunteers.
- ❖ They just have to purchase our books (Class V 125-155 Class XII)
- ❖ They just have to give us exam fee (35-41) twice in a year.

## Benefits of Schools:

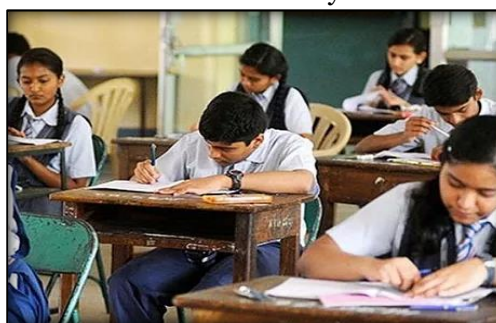

Very easy to understand study

Free Faculty.

Free computers for lab.

Exam for growth of students

10,000 every year for maintenance

National Certificate for every student every year

Prize for every 1<sup>st</sup> student.

Free Cyber Security awareness

Desktop/laptop for district topper.

Award district topper's HM
